Those are great news. Do you have a preliminary breakdown in terms of those who were requesting action in favor of bilingual labeling and those against?

And by the way, Happy New Year.

Hi Kathy,

Yes, the comments are in- over 200! Katie and I have gone through them all and pulled studies from those that cited them. Now we are working on briefing our management and OPP will decide how to respond and if we will take any action (rule making or other).

Hope all is well across the river!

thanks, Rusty. When I worked in OPP we drew upon the AAPCC data to develop our pesticide poison prevention outreach materials.> As I recall, each year there are about 70,000 calls about exposure incidents involving kids (17 and under), roughly 12-15K of which involve rodenticides (and of those involving rodenticides the vast majority involve children under 6.

The Penn State folks who are copied on this email do tremendous amount of outreach and are part of a large network of IPM proponents that are working to get the word out on rodenticides so I am glad you are now in communication with them and know they will appreciate the feedback.

I showed them - and a few other colleagues - the rodenticide brochure you developed last fall and received some comments. I have comments as well. I think this brochure could be very useful but I think for it to be widely embraced as an outreach tool, it would need to be tweaked -- and vetted by stakeholders that work with the target audience for which this brochure was developed. Would you be open to that?

If so, I could distribute the revised brochure broadly with EPA grantees, healthy homes experts, etc. I participate on ASTHO (Amer Assoc of State and Territorial Health Officials) monthly calls as EPA's liaison for kids health issues, so this could be another outlet for the brochure.

Maia - I assume from Rusty's note that comments on the bilingual labeling FR are in. What are your next steps? inquiring minds want to know:-)
